

## Variance<sup>®</sup> Sealer - PlasterShield<sup>™</sup>

PlasterShield<sup>™</sup> is a trowel or blade applied high performance epoxy-acrylic hybrid sealer. PlasterShield<sup>™</sup> was developed by skilled artisan plasterers specifically for wall protection over plaster products and other smooth decorative coatings. It is used to improve resistance to water, chemicals, stains, scratches, and scuffs on smooth plaster finishes. In addition to increasing performance, PlasterShield<sup>™</sup> adds luster and shine, imparting another dimension to your wall finish. It may also be used as an exterior wall sealer.

Because PlasterShield<sup>™</sup> is trowel applied, it does not leave the roller marks or stipple that can often be seen with roller or spray applied sealers.

PlasterShield<sup>™</sup> may be used for interior and exterior applications over smooth surfaces. It may be used to seal any smooth Variance<sup>®</sup> finish. You may also use it to seal other types of plaster or wall finishes, but we recommend you test an inconspicuous area to evaluate compatibility.

PlasterShield<sup>™</sup> is also tintable with universal colorants or may be used as a medium for metallic flakes, mica, or other decorative embellishments.

PlasterShield<sup>™</sup> is available in both Satin and Gloss versions. PlasterShield<sup>™</sup> Satin adds an appealing, subtle luster to many smooth plaster surfaces while increasing overall performance. PlasterShield<sup>™</sup> Gloss is ideal for increasing or maintaining shine. It is especially suited for use over our high polish Venetian plaster, Brio<sup>™</sup>, adding extra protection while not compromising shine.

[PlasterShield<sup>™</sup> is now available for purchase on our website.](#) Give it a try and you will see how easy to apply, cost effective, and beautiful it really is.
